

PPE - For Unit Wide Airborne Precautions

For all health & social care settings

COVID-19 cannot be transmitted via the skin

Remember to consider other infectious pathogens - PPE should be changed after providing care to patients who have other known/suspected infectious pathogens

Gloves must not be washed or gelled using ABHR

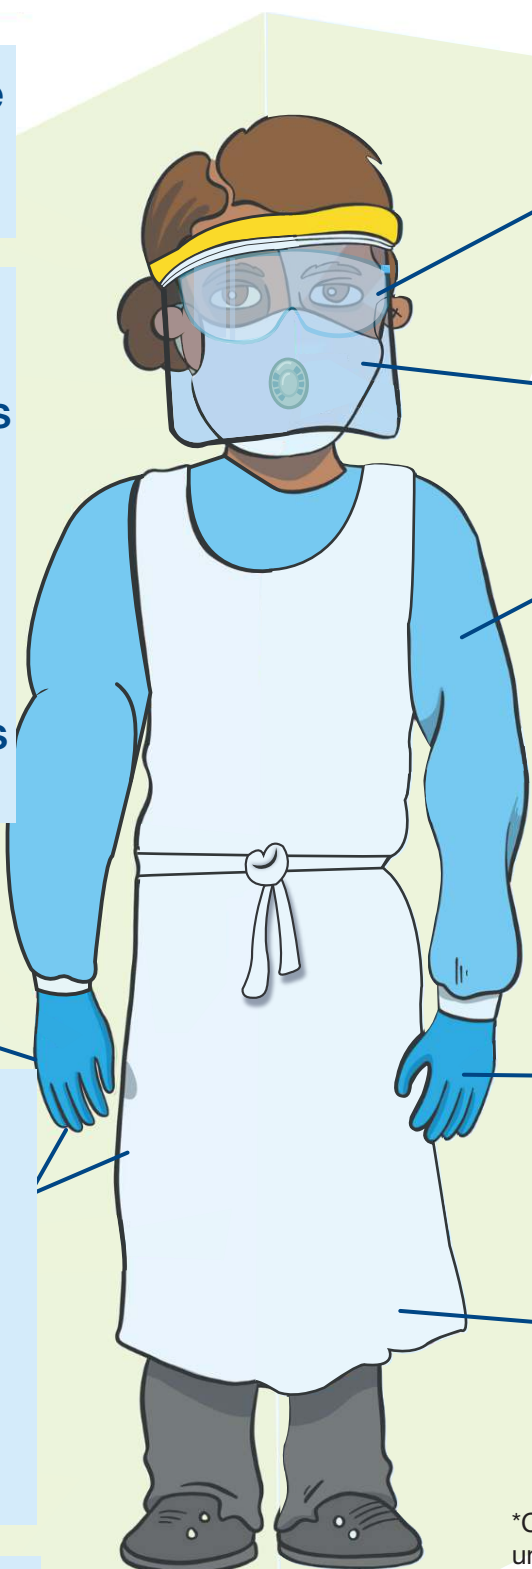

Gloves and aprons must never be used sessionally

Change between tasks/patients

Do not double glove

Do not wear in general circulation around unit

Always don a new set of PPE before undertaking an aseptic procedure

Full face shield/Eye Protection (Sessional use)*

FFP3 Respirator (Sessional use)*

Long Sleeved Fluid Repellent Gown (Sessional use)*

Do not use thumb loops - tuck these into cuff of gown

Gloves (Single use)

worn for all direct patient care and when performing AGP

Disposable Apron (Single use)

Wear on top of gown when delivering direct patient care

*Change if wet, damaged, soiled or uncomfortable. Where forearms of gowns have been in direct contact with a patient i.e. during proning, gown should be changed before providing care to any other patient
