

VASOPRESSIN for hypotension in organ donors
(also known as Argipressin, Pitressin)

PRESENTATION:	Ampoules containing 20units/ml of vasopressin.
INDICATION:	First line drug for management of hypotension associated with satisfactory filling pressures. If an additional vasoconstrictor is required to maintain SVR then low dose noradrenaline should be used.
DOSE AND ADMINISTRATION:	ICU STANDARD INTRAVENOUS INFUSION 20 units vasopressin, made up to 50mls with glucose 5%. Initially 1.2mls/hour (0.48units/hour), titrated according to response to 10mls/hour (4units/hour). Infuse through a central venous catheter.
CONCENTRATION:	0.4units/ml
STABILITY:	Physically and chemically stable for 12 hours at room temperature
ADDITIONAL INFORMATION:	Less stable in sodium chloride 0.9%.
