Critical Care Guidelines FOR ICU USE ONLY

INTRAVENOUS INFUSION PRESCRIBING INFORMATION (**For further information and references see individual drug monographs and guidelines on the critical care intranet site**)

| • | | | pris and galdelines on the critical ca | |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------|------------------------------------|-------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Drug | Additional information | Dose/Amount | Diluent/volume (refers to the final volume of the infusion) | Rate/duration (ml/hr) |
| Actrapid | Actrapid is a brand of soluble insulin used for glycaemic control and variable rate insulin infusions. Prescribe as Actrapid. | 50 units | 50ml sodium chloride 0.9% | According to Insulin therapy in Critical Care protocol. Please note there are two protocols. |
| Adrenaline | Single strength | 8mg 20mg 40mg | 100ml glucose 5% or 0.9% NS 250ml glucose 5% or 0.9% NS 500ml glucose 5% or 0.9% NS | 0-20mls/hr |
| All strengths via CVC* | 80micrograms/ml | | 9 | 0-20mls/hr |
| CVC*- Central Venous Catheter | Double strength | 40mg 80mg | 250ml glucose 5% or 0.9% NS 500ml glucose 5% or 0.9% NS | 0-20mls/hr |
| | 160micrograms/ml | | | 0-20mls/hr |
| | Quadruple strength | 80mg 160mg | 250ml glucose 5% or 0.9% NS 500ml glucose 5% or 0.9% NS | 0-20mls/hr |
| | 320micrograms/ml | J | 3 | 0-20mls/hr |
| Alfentanil | 500micrograms/ml | 15mg | 30ml undiluted | 1-4mls/hr |
| | **Remember PRN bolus doses** | 25mg | 50ml undiluted | 1-4mls/hr |
| Aminophylline | Load centrally or peripherally in 100ml glucose 5% (or 0.9% NS), both over 20 minutes. Maximum loading dose is 500mg | 500mg (maintenance Infusion) | 500ml glucose 5% or 0.9% NS | 500micrograms/kg/hr (prescribe in ml/hr) initially, then adjusted according to level ie. for 70kg patient 35mls/hr. Based on ideal body weight. |
| Amiodarone | Loading dose (large vein) | 300mg | 250ml glucose 5% | Over 1 hour |
| | Maintenance infusion via CVC* | 900mg | 500ml glucose 5% | 21mls/hr over 23 or 24 hours (dependent upon whether loading dose was given). |
| Atracurium | 10mg/ml | 500mg | 50ml undiluted | 0.65-0.79mg/kg/hr. Based on ideal body weight for obese patients. Prescribe in ml/hr. |
| Clonidine | 15micrograms/ml | 750 micrograms | 50ml sodium chloride 0.9% or glucose 5% | Up to 2 micrograms/kg/hr, prescribe in ml/hr i.e.9.5mls/hr for 70kg patient. |
| Dexmedetomodine | 8microgram/ml | 2000micograms | 250ml glucose 5% or 0.9% NS | Initially 0.7micrograms/kg/hr, Range 0.2-1.4micrograms/kg/hr. See monograph. |
| Dobutamine | 5mg/ml. CVC* | 250mg | 50ml undiluted | See monograph. |
| Epoprostenol | 3000nanograms/ml | 150,000nanogram s | 50ml sodium chloride 0.9% | As per CVVHD protocol and monograph. |
| Esomeprazole | Loading dose of 80mg in 100ml sodium chloride 0.9% over 30mins then continuous infusion | 80mg | 100ml sodium chloride 0.9% | 10mls/hour for 72 hours. |
| Fentanyl IVI | | 1500micrograms 2500microgram | 30ml undiluted 50ml undiluted | See monograph. |
| Fentanyl PCA | | 1000micrograms | 50ml sodium chloride 0.9% | Usually, 10microgram bolus with 5 minute lock out. |
| Furosemide | 10mg/ml | 250mg | 25ml undiluted | Usually 5-20mg/hr (0.5-2mls/hr) |
| Glyceryl trinitrate | 1mg/ml via CVC* | 50mg | 50ml undiluted | 0.6-12mls/hr |
| Heparin | For treatment of DVT, PE.1000units/ml undiluted. | 40,000units | 40ml undiluted | depends on target APTTr/ unfractionated heparin AntiXa level. |
| Heparin | For anticoagulation in CVVHD 250units/ml. | 10,000units | 40ml sodium chloride 0.9% | According to CVVHD protocol. |
| Hydralazine | 1mg/ml | 60mg | 60ml sodium chloride 0.9% | Initially 12-18ml/hr. Maintenance 3- 9mls/hr |
| Insulin- see Actrapio | d which is the brand of insulin used i | n the "iv insulin thera | apy in Critical Care" protocol. | |
| Isoprenaline | Using isoprenaline hydrochloride | 2mg | 500ml glucose 5% or 0.9% NS | As per protocol, contact cardiology. |
| Ketamine | For status epilepticus. This is not the preparation used for pain. IV loading dose: 3mg/kg based on ideal body weight. | 2500mg | 50ml undiluted | Maintenance infusion: 1-5mg/kg/hr (1.4-7ml/hr if 70kg) but discuss range to prescribe with consultant. |
| Labetalol | Centrally: 5mg/ml | 200mg | 40ml undiluted | 0-24ml/hr can increase to 32ml/hr |
| | Peripherally: 1mg/ml | 500mg | 500ml glucose 5% or 0.9% NS | 0-120ml/hr can increase to 160ml/hr |
| Mannitol 20%. Preso | cribe in as required therapy. Dose: 20 | 00ml:over 15mins, R | oute: IV, Indication: raised ICP | 1 |
| Metaraminol | 500microgram/ml | 50mg | 100ml glucose 5% | 0-10ml/hr |
| Midazolam | Single strength. 1mg/ml | 60mg 50mg PFS 50mg | 60ml glucose 5% or 0.9% NS 50ml glucose 5% or 0.9% NS undiluted | 0-6ml/hr |
| | Double strength. 2mg/ml. Use in status epilepticus. | 120mg 100mg | 60ml glucose 5% or 0.9% NS 50ml glucose 5% or 0.9% NS | 0-5ml/hr. See monograph for doses in status epilepticus. |
| Morphine IVI | 2mg/ml | 100mg | 50ml undiluted | 0-5ml/hr |

Critical Care Guidelines FOR ICU USE ONLY

Electrolytes are prescribed on the 24hour chart.

| Calcium | 4.5mmol or 4.46mmol (depending on preparation available) calcium gluconate 10% in 100ml glucose 5% or 0.9% NS over at least 30minutes peripherally or centrally. In cases of severe hyperkalaemia, 6.8mmol (30ml of calcium gluconate 10%) may be given undiluted over 10minutes. | | | | |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| Magnesium | Magnesium sulphate 50%: 20mmol (10ml) in 250ml glucose 5% (or 0.9% NS) peripherally or in 100ml glucose 5% (or 0.9% NS) centrally. Both over 4 hours. | | | | |
| Phosphate | Phosphate polyfusor: 500ml over 12 hours, rate 41.6mls/hr. | | | | |
| Peripherally | Sodium glycerophosphate 21.6% (1mmol/ml Phosphate)-20mmol (20ml) in 250ml glucose 5% or 40mmol (40ml) in 500ml glucose | | | | |
| , , | 5% over 5 hours. | | | | |
| Phosphate | Phosphate polyfusor:500ml over 12 hours. Rate 41.6mls/hr. Can be given over 6hrs if required, rate 83.3ml/hr. | | | | |
| Centrally | Sodium glycerophosphate 21.6% (1mmol/ml Phosphate)-20mmol (20ml) in 50ml glucose 5% over 5 hours, rate 10mls/hr or 40mmol | | | | |
| • | (40ml) in 100ml glucose 5% over 5 hours, rate 20ml/hr. | | | | |
| | Potassium acid phosphate 13.6%: (1mmol/ml Phosphate)-20mmol (20ml) in 50ml glucose 5% over 5 hours, rate 10ml/hr or 40mmol | | | | |
| | (40ml) in 100ml glucose 5% over 5 hours, rate 20mls/hr. | | | | |
| Potassium | 20mmol in 500ml glucose 5% or 0.9% NS through a large vein. | | | | |
| Peripherally | 40mmol in 500ml glucose 5% or 0.9% NS through a large vein. | | | | |
| | Maximum rate is 20mmol/hr with ECG monitoring. | | | | |
| | Maximum rate is 10mmol/hr with no ECG monitoring. | | | | |
| Potassium | 20mmol or 40mmol in 100ml glucose 5% or 0.9% NS. If ECG monitoring, maximum rate is 20mmol/hr. | | | | |
| Centrally | No ECG monitoring, maximum rate is 10mmol/hr. | | | | |

0.9% NS= sodium chloride 0.9%
